5.2.2 API Details:.....	29

1. Introduction

1.1 Purpose:

This document is designed to guide the external team to communicate with Screenate application/web server using JSON and REST API protocol. This document helps to understand the communication process, parameters required, methods supported using the REST API protocols.

1.2 Overview:

Screenate API provides a way for the client to place a new order request and upload supporting documents associated with order placement, get order status, get order output.

1.3 Target Audience:

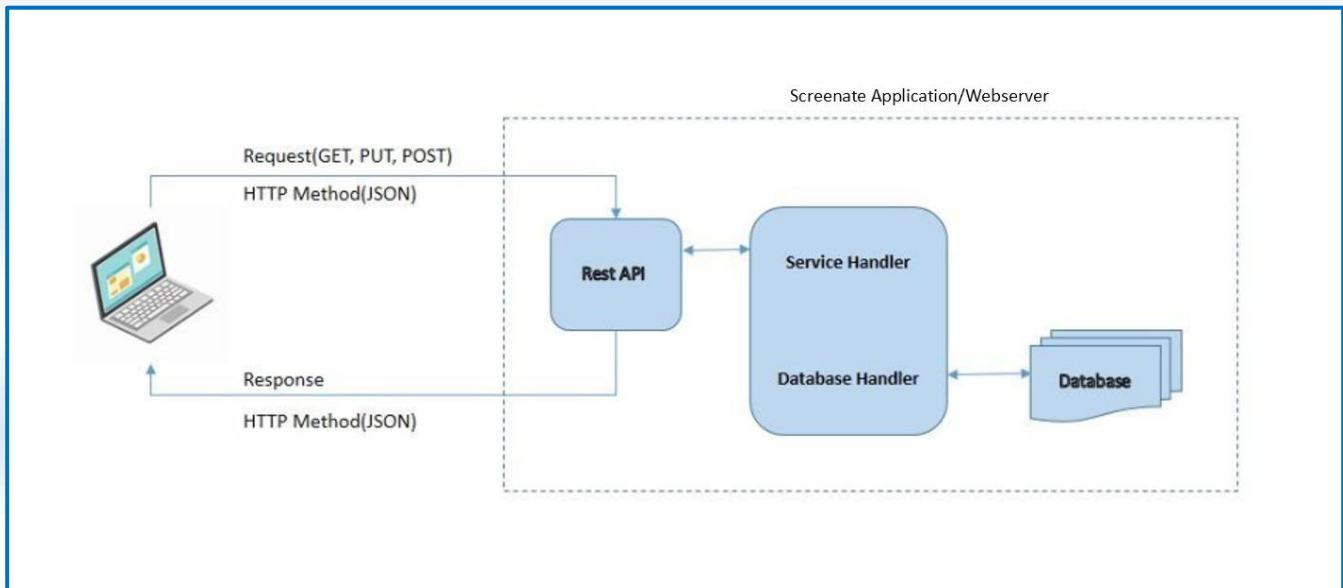

This document is intended for anyone who wants to understand web services communication protocols for order placement.

2. Process Flow

The Screenate REST API web services can be used for the following

- Create a new order/case
- Output (Reports)
- Status of the case

3. Architecture Diagram

4. Web Services Architecture:

4.1 About REST API:

A REST resource is an abstraction of a piece of information or an action, such as a single data record, a collection of records, or a query. Each resource in REST API is identified by a named Uniform Resource Identifier (URI) and is accessed using standard HTTP methods (GET, POST, PUT, and DELETE). REST API is based on the usage of resources, their URIs, and the links between them. A resource can be used to interact between two systems. For example, you can:

- Create a new order/case
- output (Reports)
- Status of the case

4.2 API Methods:

The Method defines the action to take regarding the resource. Methods used in our Screenate web services:

- POST — creates a new resource
- PUSH — get the status of the order and the final report.

4.3 About JSON:

Support for JSON and XML JSON is by default. The JavaScript Object Notation (JSON) format is supported with UTF-8. Date-time information is in ISO8601 format. XML serialization is like SOAP API. XML requests are supported in UTF-8 and UTF-16, and XML responses are provided in UTF-8 format.

5. Screenate API Integration Suite:

5.1 New Order Placement API:

5.1.1 Overview:

New Candidate creation API enables user to send a new case request to Screenate.

5.1.2 API Details:

Endpoint: <https://dashboard.screenate.com/api/create-candidate>

Method: POST

Headers:

- API_KEY: XXXX
- Content-Type: application/json

Request Parameters:

Parameter	Required	Type	Remarks
firstName	Yes	Text	First name of the candidate
middleName	Optional	Text	Middle name of the candidate
lastName	Yes	Text	Last name of the candidate
email	Yes	Text	E-mail of the candidate
dob	Yes	Text	Date of Birth of the candidate

contactNo	Yes	Text	Contact number of the candidate
gender	Yes	Text	Gender of the candidate
fatherName	Yes	Text	Name of Father of the candidate
country	Optional	Text	Nationality of the candidate
aadhaar	Optional	Text	Aadhaar ID number of the candidate
panNumber	Optional	Text	PAN of the candidate
clientRefId	Optional	Text	ID of the client sending the candidate details
components: authorization: componentId	Optional	Text	ID of the component.
type: authorizationLOA	Optional	Text	Type of authorization
attachments	Optional/Mandatory	Text	Can be the link to the attachment, or a base64. If the authorization component is given, then this field is mandatory.
identity: componentId	Optional	Text	ID of the component
type	Optional	Text	Type of the ID. The values can be AADHAR, DL, VOTERID, PAN, PASSPORT, NationalCheck
ID Type	Optional	Text	ID of the selected identity type. The values are AADHAR = 1 DL = 4 VOTERID = 2 PAN = 5 PASSPORT = 3 NationalCheck = 6
name	Optional	Text	Name of the candidate
Father Name	Optional	Text	Name of Father of the candidate.
DOB	Optional	Text	Date of Birth of the candidate.
ID Number	Optional	Text	Unique number of ID of the candidate.
DL Issue Date	Optional	Text	If the type is DL, this is the DL issue date.
State	Optional	Text	State of the candidate where the Voter ID is valid
Date Of Expiry	Optional	Text	Date of expiry of the Passport.
attachments	Optional	Text	Can be the link to the attachment, or a base64.
Address: componentId	Optional	Number	ID of the component. (This can be given multiple times as we have different type of addresses)
type: "permanantAddress"	Optional	Text	Type of the address. The value can be currentAddress, previousAddress
Address	Optional	Text	Address of the candidate.
City	Optional	Text	City of the Candidate.
State	Optional	Text	State of the candidate
Country	Optional	Text	Country of the candidate

Pincode	Optional	Text	Pin code of the address
Contact No	Optional	Text	Contact of the candidate
Period Of Stay From	Optional	Text	First Date of the candidates stay at the given residence In format: DD-MM-YYYY For ex.: 07-07-2016
Period Of Stay To	Optional	Text	Last date of the candidates stayed at the given residence In format: DD-MM-YYYY For ex.: 01-12-2019
Proof Type	Optional	Text	Value will be 1 if the candidate stayed at the given place, if not 0 should be given
attachments	Optional	Text	Can be the link to the attachment. Or a base64
education: "componentId": 3	Optional	Text	Component ID of the component
type: EDU	Optional	Text	Type of the component
Education Name	Optional	Text	The type of education (can be Highschool, Graduation, Post Graduation, Doctorate.)
Name Of College / School	Optional	Text	The school/College of the candidate
University / Board Name	Optional	Text	University/Board of the college/School of candidate
City	Optional	Text	The name of the city where the candidate's given education is pursued
Pincode	Optional	Text	Pin code of City, where the College/School resides
Contact No	Optional	Text	Contact of the college/school
Qualification	Optional	Text	Qualification of the candidate
Enrollment / Registration No	Optional	Text	Unique registration/ enrolment/admission/roll no of the candidate
Specialization	Optional	Text	Specialization in the qualification if applies
Period Of Study From	Optional	Text	From date of Period of Study In format: Mon YYYY For ex.: Feb 2021
Period Of Study To	Optional	Text	To date of Period of Study In format: MON YYYY For ex.: Jul 2025
Class / Division / Percentage	Optional	Text	Marks/ Class / Division / Percentage of the candidate
Country	Optional	Text	Country of the educational institute
Year Of Passing	Optional	Text	Year of passing of the course
Course Type	Optional	Text	Is a Boolean when it's a regular course its 1 and when it's a distance course its 0.
attachments	Optional	Text	Can be the link to the attachment. Or a base64
employment: "componentId": 4	Optional	Text	The ID of the component

type: Current Employer	Optional	Text	Type of the employer, can also be Previous Employer
Company Name	Optional	Text	Company name
Address Line 1	Optional	Text	Company address
City	Optional	Text	Company residing city
Employee Code	Optional	Text	Candidates' employee code in the company
Designation	Optional	Text	Designation of the candidate in the company
Employment Type	Optional	Text	Can be Parttime, Fulltime, Permanent, Internship, Apprenticeship
Contact Person	Optional	Text	Hr Name of the company
Contact No	Optional	Text	Contact number of the HR
Supervisor Designation Name	Optional	Text	Supervisor name
Supervisor Email	Optional	Text	Supervisor email ID
Supervisor Contact No	Optional	Text	Supervisor contact number
Department	Optional	Text	Department in the company
CTC	Optional	Text	Cost to Company, annual salary
Reason For Leaving	Optional	Text	Reason for leaving the company
Date Of Joining	Optional	Text	Date of joining in the company In format: DD-MM-YYYY For ex.: 01-12-2019
Date Of Relieving	Optional	Text	Date Of Relieving from the company In format: DD-MM-YYYY For ex.: 01-12-2019
attachments	Optional	Text	Can be the link to the attachment. Or a base64
fresher	Optional	Text	If "yes" then no need to enter the current/previous employer details, if "no" then need to enter the employer details that are mandatory.
jobRoleName	Yes	Text	The package name which is chosen as a package of components.

Request Example:

```

Response Parameters:

Parameter	Remarks
statusCode	Status of the API Response
status	Status of the candidate creation
id	Is the unique id of the candidate in the tool
userId	Is the ID of the user in DB
clientId	Is the ID of the client
jobRoleId	Is the ID of the component package
newCandidateTrackingId	Is the tracking ID of the candidate in tool
gender	Given gender of the candidate

firstName	Given first name of the candidate
middleName	Given middle name of the candidate
lastName	Given last name of the candidate
CEAInitiationDate	Created date
supplementaryReportDate	Is the date of generating a supplementary report
reInitiatedDate	Is the reinitiated date of the case
mailToCandidate	If mail to the candidate is marked yes, the response is true, if marked no, the response is false
fatherName	Father name of the candidate
contactNo	Contact number of the candidate
email	Email address of candidate
additionalEmail	Secondary email address of the candidate
dob	Date of birth of the candidate
country	Given Country name of the candidate
ssncheck	SSN of the candidate
uan	UAN of the candidate
aadhaar	Aadhaar number of the candidate
panNumber	PAN of the candidate
settings	Derivation of all the Components selected
status	Is default, Awaited status as the case has been just created
interimStatus	Will be '0' as default as IR is not generated
tatDuration	Will be given NULL as the candidate has just been created
profilePicture	Candidate's profile picture, will be null if no value(file) is present
isDeleted	Is 'False' by default as the user is not being deleted

reminderEmail	Will be 'True' if the candidate gets remainder mails
dataEntryDone	Data entry status
dataEntryDoneAt	Data entry completed date
verifierDone	Verification status
verifierDoneAt	Verification completed date
qaDone	QA status
qaDoneAt	QA completed date
clientRefId	Job role ID from client side
dateOfJoining	Date of joining of the candidate
CEInsufficiencyClearanceDate	CE insufficiency cleared date
finalReportDate	Final report generated date
interimReportDate	IR generated date
publishStatus	Status of the candidate, if the report is generated or not
interimReportSLA	IR generated date
finalReportSLA	Final report generated date
supplementaryReportSLA	Supplementary report generated date
applicantId	The emp if the candidate
candSettings	Candidate settings, where we store recruiter details
tat	Total TAT of the case
createdAt	Case created date
updatedAt	Is the date which will be recorded when candidate profile is updated; if not updated takes the created date
candidateComponents	Components that are in the package
id	Unique ID created for the component respective to the candidate
candidateId	CandidateID

componentId	Unique Component ID
type	Type of the component
Uniqueld	Unique ID of the component
candidateComponentAttachments	Attachments related to the specific component
message	Response message on candidate creation

BGV Status codes:

Status Code	Status
1	AWAITING
2	WIP
3	CURRENT EMPLOYMENT_PENDING
4	INSUFFICIENT
5	CURRENT EMPLOYMENT CHECK ON HOLD
6	STOP
7	OFFER_DECLINED
8	DISCREPANCY
9	UNABLE_TO_VERIFY
10	CLEAR
11	NOT_APPLICABLE

Response (Error: Validation Failure):

- **HTTP Status Code: 400 Bad Request**
- **Response Body:**

```
{
  "statusCode": 400,
  "message": "Unexpected token { in JSON at position 365",
  "error": "Bad Request"
}
```

Response (Error: Invalid Token):

- **HTTP Status Code: 403 Forbidden**
- **Response Body:**

```
{  
  "statusCode": 403,  
  "message": "Invalid API_KEY"  
}
```

Response (Error: Duplicate Candidate):

- HTTP Status Code: **409 Conflict**
- Response Body:

```
{  
  "statusCode": 409,  
  "message": "Candidate already exists."  
}
```

5.2 PUSH Case Report API: (proposal)

5.2.1 Overview:

We are pleased to present a proposed enhancement to your current integration with the Screenate Application.

At present, your system utilizes the API for Candidate creation. We would like to inform you of an additional functionality that enhances the user experience by automating the delivery of candidate background verification (BGV) status updates.

With this enhancement, the status will be **automatically pushed to your system** whenever the candidate's BGV status is updated by IDA. This is achieved through an API integration **using the push method**, eliminating the need for users to manually request closed case reports through the application interface.

This functionality has already been successfully implemented for one of our other clients, and we believe it would provide similar value to your users. By enabling this feature, your users will receive real-time updates on closed case statuses, improving usability and operational efficiency.

Please let us know if you are interested in enabling this functionality, and we can proceed with providing the necessary technical documentation and integration support.

5.2.2 Functionality:

This API functions as follows: when a candidate's BGV status is "clear," the push request will include selected candidate details along with the report encoded in base64 format. If the status is anything other than "clear," only the candidate's details and the current status will be pushed.

5.2.3 API Details:

Status:

Endpoint: Clients API (this should be provided by the client)

Method: Push

Headers (Authentication):

Content-Type: application/json

Authorization: Bearer token goes here; this should also be provided by the client.

Request Parameters:

Parameter	Remarks
name	The ID of the order for which the status is being queried.
email	Email ID of the candidate
number	Number of the candidate
job_id	Package ID (components)
seeker_id	Client ID/Emp ID
bgv_status	BGV status of the candidate case
bgv_report	Final Report of the BGV in base64 format
caseID	Tracker ID of the Candidate

Request Example:

```
{  
  "name": "Candidate name",  
  "email": "candidate@mail.COM",  
}
```

```
"number": "9123456788",  
"job_id": "456",  
"seeker_id": "271",  
"bgv_status": "Clear",  
"bgv_report": "https://screenate-dir.s3.ap-south-1.amazonaws.com/.pdf?X-Amz-  
Adential=AKIATWBJ73b630d7b0250e34c8b432fc41&X-Amz-SignedHeaders=host&x-amz-checksum-  
mode=ENABLED&x-id=GetObject",  
"CaseID": "IDA1507654361"  
}
```

Response (Success: Completed Case with Clear status):

- **HTTP Status Code:** 200 Success
- **Response:**

```
{  
  "statusCode": 200,  
  "message": "Success"  
}
```

Since the report request have been created the client will get the status update automatically, with the report.

Response (Success: Case with other than Clear status):

- **HTTP Status Code:** 200 Success
- **Response:**

```
{  
  "statusCode": 200,  
  "message": "Success"  
}
```

Since the report request have been created the client will get the status update automatically.

Response (Error: Invalid bearer Token):

- HTTP Status Code: **404 Unauthorized**
- Response:

```
{  
  "statusCode": 404,  
  "message": "Unauthorised"  
}
```
